CV/Resume	Yes	CV/Resume	01-30-2024

I am a person who has an interest in solving problems using digital or technological means in order to reduce workload or make work easier. Creativity or being innovative is my hallmark.
The dynamic nature of technology constantly intrigues me, as it serves as a catalyst for innovation and progress in various domains. The ability of technology to break barriers, connect people globally, and solve complex problems captivates my interest and fuels my passion.

The ever-evolving landscape of technology offers a canvas for creativity and problem-solving. I am fascinated by the way technology enhances efficiency, simplifies tasks, and facilitates communication. From the marvels of artificial intelligence and machine learning to the intricate world of coding and software development, each facet of technology holds the potential to revolutionize industries and elevate the human experience.

These few points drive me to pursue a graduate degree in cyber security and these are some of the goals and reasons why I would like to pursue that:

Career Advancement
A graduate degree serves as a catalyst for career progression within any field of your choice. Whether aiming for leadership roles, such as Chief Information Security Officer (CISO), Senior Accountant, Chief Auditor or aspiring to become specialists in any field of discipline, advanced education equips individuals with the knowledge and credibility needed to stand out in a competitive job market.

Contributing to national security
With the increasing prevalence of cyber threats on a global scale, there is the need for me to develop my expertise in safeguarding critical infrastructure, securing government systems, and protecting sensitive data aligns with broader efforts to enhance the cybersecurity posture of nations.

Meeting Industry Demand
By pursuing a graduate degree, individuals and for that matter I would be able to position themselves as valuable assets to organizations seeking experts capable of safeguarding sensitive information, mitigating risks, and ensuring the resilience of digital infrastructures.
